DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 09/461,402, filed on December 15, 1999. **Specification**

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-11 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,710,894. Although the conflicting claims are not identical, they are not patentably distinct from each other because the only difference between the pending claims (1-5)

of the application and the allowed claims of the patent is that a panel section in the application is configured to input information regarding an identification of a user to the image data communication apparatus, while the panel section in the patent is configured to select information regarding the identification of the user in a memory, which stores user identification information. It is well known in the art that a keypad is usable for both entering user information as well as for selecting user information previously stored in a memory. For example, it is well known in facsimile communications to store frequently-dialed fax numbers in a memory for one-touch dialing on a keypad, and using the same keypad for regular dialing. It would have been obvious to one of ordinary skill in the art that the panel section in the patent may be modified so as to enable a user to input identification information not previously stored in the memory in the same manner that a user inputs a destination fax number when the fax number is not stored in a memory for one-touch dialing. Furthermore, with regard to pending claims 6 and 7, the method steps are performed by the apparatus of patent claims 1 and 5, respectively, with the exception of the inputting of information regarding user identification, which, as related above, would have been an obvious modification to one of ordinary skill in the art. Moreover, pending claims 8-11 further recite a transmitter (claim 8) and corresponding transmission step (claim 10), which reads on lines 2-6 of patent claim 1 and lines 3-4 of patent claim 5, respectively.
